IPS InLine® / IPS InLine® PoM Opaquer F

Fascinating dynamics of light

Our eye perceives even the smallest play of light and colour. The constant interplay of light creates a lifelike appearance.

Materials that exhibit a lifelike distribution of fluorescence are required to create restorations that are true imitations of their natural counterparts.

Enhanced fluorescence

New: The Opaquer F is available in the 1-g syringe. It helps reinforce the in-depth fluorescence. Fluorescence can be found in all our IPS InLine materials.

Totally uncomplicated: You can achieve outstanding aesthetic in-depth effects with the Opaquer F. Due to the increased fluorescence, the restoration seems to shine from within.

As easy as that:

Either: Apply the Opaquer F as a thin, third opaquer layer and fire.

Or: Mix up to 20% of Opaquer F with the conventional IPS InLine/IPS InLine PoM Opaquers before the second layer is applied.

IPS InLine/IPS InLine PoM Opaquer F, the mixed paste and the existing opaquers are fired at 930°C.

Delivery forms

IPS InLine/IPS InLine PoM Opaquer F 1 g

The 16 A-D, 20 Chromascope and two Bleach paste opaquers are available in the 3-g syringe and 9-g jar.

Natural molar in black light.
