📱 2. Scan & design

Individually design your restorations taking into account the respective material parameters

✉️ 3. Data transfer/upload

– Tooth-supported restorations

Select the manufacturer:
"Ivoclar Digital Service+"
and send the data

Create order and upload data

– Implant-supported restorations (bars/bridges)

In order to produce implant-supported restorations, the master model is required.
The implant positions will be measured in the Ivoclar Digital milling centre and compared with the scan data. A 100% fitting accuracy can therefore be guaranteed.

– Pack the model records securely (implant model incl. full, uncut gingival mask)

– Include the printout of the order form
